Experience

Senior Software Engineer, Seismic – Toronto, ON

Apr 2023 – Present

- Drove behavioral analytics and skills reporting workflows from ambiguous requirements through production launch, helping expand analytics adoption from early customer usage to broader enterprise adoption.
- Built content-authoring capabilities for reusable shared text, navigation customization, and media selection, supporting brand-consistency workflows for enterprise Financial Services customers.
- Improved application responsiveness with client-side caching and optimistic UI techniques, replacing 10-second blocking update flows with responsive, non-blocking interactions.
- Mentored engineers and contributed reusable frontend patterns and shared libraries, improving implementation consistency and reuse across teams.

Software Engineer, Twitter – Toronto, ON

Oct 2021 – Jan 2023

- Built internal Trust & Safety tools used by operations teams to review, route, and act on moderation cases.
- Led development of multiple web-based tools, aligning stakeholders and engineers across teams while contributing shared React and Node.js patterns.
- Designed and implemented backend pagination, filtering, and sorting for an internal case-management console, replacing in-browser loading so queues with tens of thousands of records loaded reliably.
- Built and extended event-driven moderation workflow APIs, enabling report deduplication, case updates, queue prioritization, and assignment across high-volume review flows.

Software Developer, Scotiabank – Toronto, ON

Jan 2020 – Oct 2021

- Built responsive and accessible React features and components for the Scotiabank Help Centre, serving customers globally.
- Developed Node.js REST APIs consumed by internal and customer-facing applications across the bank.
- Interviewed and onboarded engineers while supporting technical and non-technical teammates across customer-facing web delivery.
- Presented in internal web development learning sessions and contributed to shared component libraries, improving frontend consistency across teams.

Software Engineer, Solution-Tek Inc. – Toronto, ON

Dec 2017 – Dec 2019

- Implemented React and Redux UI infrastructure and components for high-performance airline industry applications.
- Built event-driven microservices in Go with RabbitMQ.

Skills

Languages: TypeScript, JavaScript, Go

Frontend: React, Redux, Next.js, GraphQL, Storybook, Jest, React Testing Library, Cypress, Playwright, Selenium

Backend and Data: Node.js, MongoDB, PostgreSQL, RabbitMQ, Redis, Snowflake

Tools: Git, Docker, CI/CD, AWS, Chrome Developer Tools, CMS, AI-assisted development workflows

Education

University of Toronto – M.Eng in Electrical and Computer Engineering

2015 – 2017

University of Manchester – B.Eng in Electrical and Electronics Engineering

2011 – 2015
